DESCRIPTORS: *Illumination, *Lighting equipment,
Mathematical analysis.

Measurements were made to verify the form of the
general formula $S = f(B, B_0, \omega)$, to determine the
qualitative relationship between glare and the position
of the glare source, and to determine the additivity of
glare produced by several sources. Here S represents
total glare effect, B is luminance of the glare source,
 B_0 is background luminance, and ω is the solid angle
subtended by the glare source at the eye of the observer.
